

TND Tablet 80 OS Update

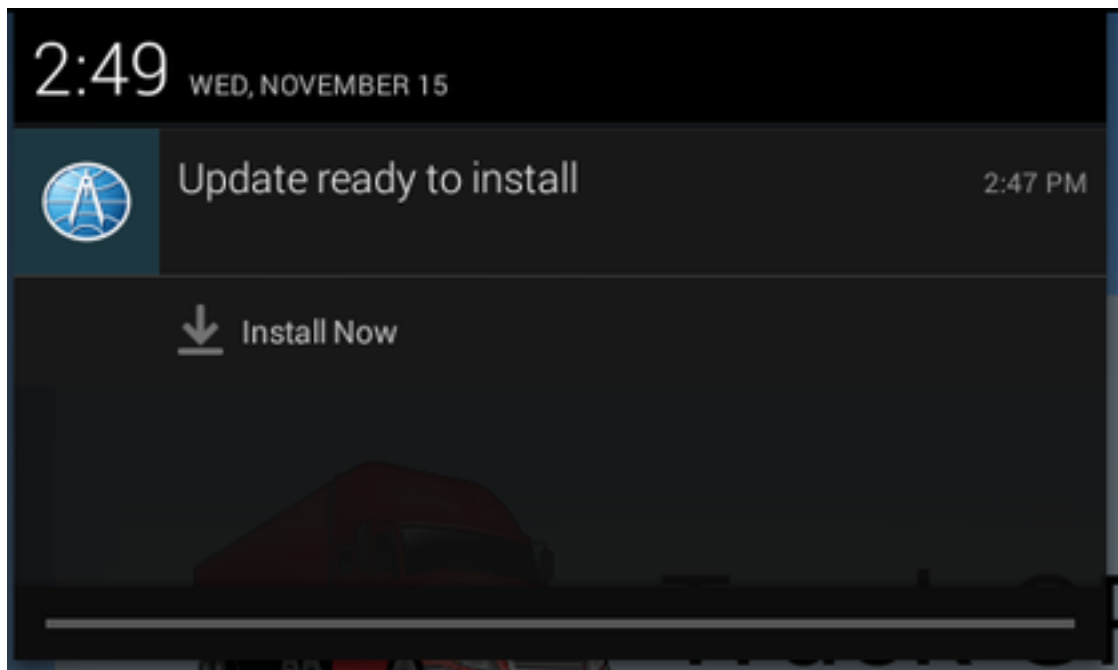

For build numbers less than 20171110

Before installing this update, you will need to check your device's current build number by going to Android Settings → About Tablet. Follow these instructions if your build number is **less than 20171110**.

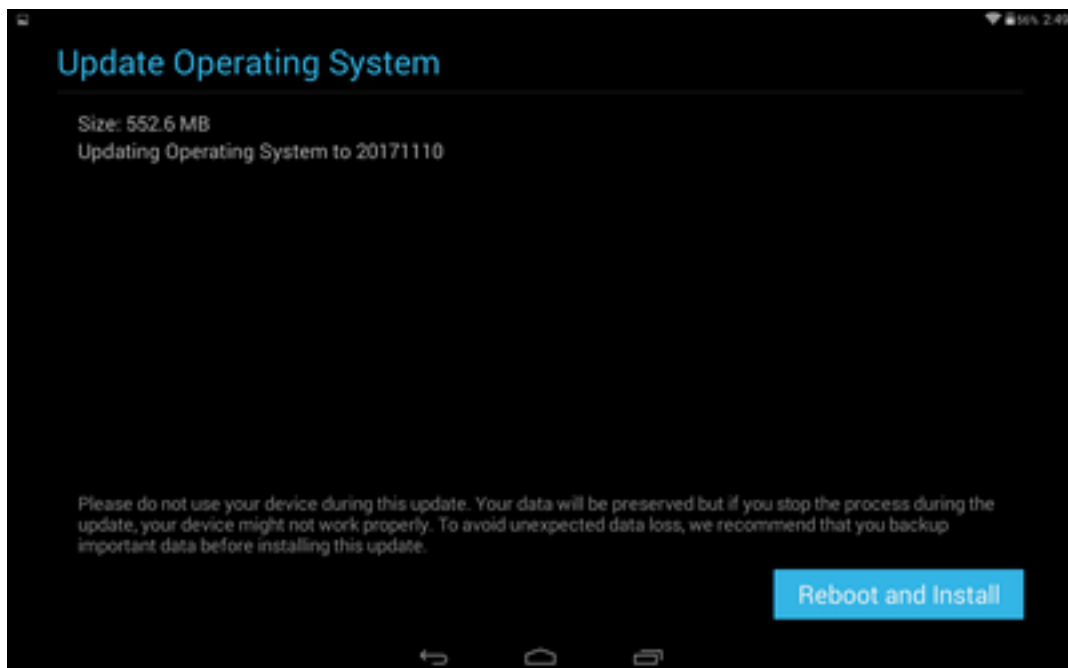

1. Connect to a reliable Wi-Fi connection.
2. "An update is available" message should appear in the status bar for an update that is 552.6MB. Tap "Download." **Note:** If this does message does not appear in the status bar, go to RM Launcher and tap on "Check for Updates."*

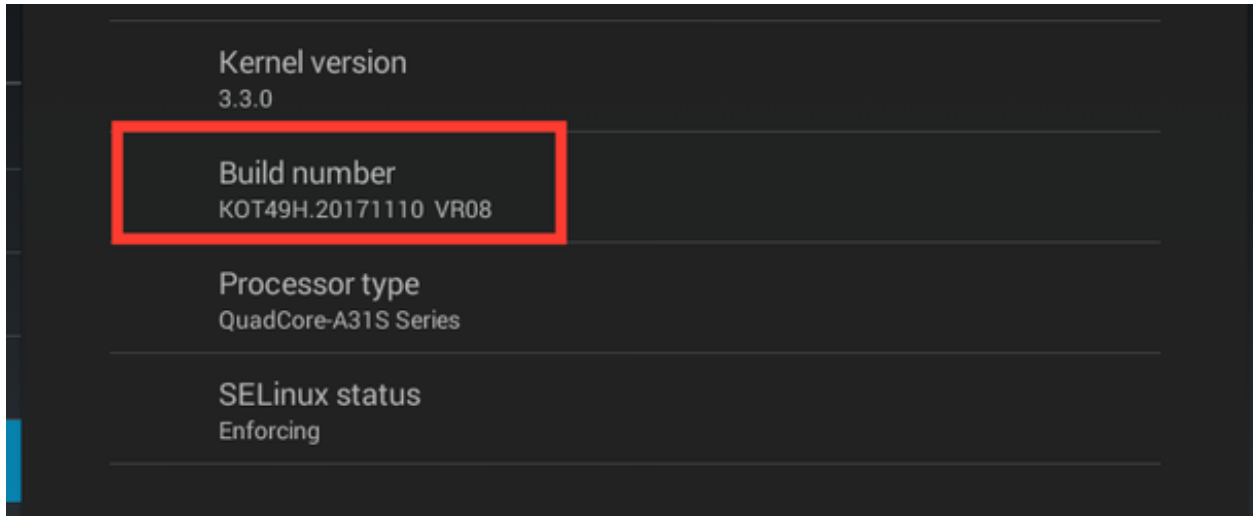

3. When the download is complete, the update will automatically begin a verification process. Once the verification process has completed, an "Update is ready to install" message will appear in the status bar. Tap "Install Now."

4. A window for "Updating Operating System" will appear on your screen. Tap "Reboot and Install." The tablet will reboot on its own.

5. After the tablet reboots, go to Android Settings → About Tablet. Make sure the build number matches 20171110.

***Troubleshooting**

If the OS update message never appears, go to Android Settings → Apps. Scroll all the way left and tap “ALL.” Find RM Services → Clear Data. Then go to RM Launcher → Check for Updates.
